Evrard's collapse, $N = 32^3$, $t = 1.2$ (float64): energy error vs fixed time step
cold Evrard collapse ($e_{th,0} = 0.05$)
mild collapse ($e_{th,0} = 0.2$)
simple source: $|\Delta E|/|E_0| = 0.64$ at every Δt
simple source: $|\Delta E|/|E_0| = 0.07$ at every Δt
final relative total energy error $|\Delta E|/|E_0|$
time step Δt
time step Δt
flux-based
flux-based corrected
flux-based corrected + flux-corrected work
$\propto \Delta t^3$
$\propto \Delta t^4$
float64 round-off floor
